FINAL REPORT - COTTON RESEARCH & DEVELOPMENT CORPORATION

PROJECT CODE: CS34C

PROJECT TITLE: Purchase And Operation Of A New Greenhouse

SUPERVISOR: Dr N.J. Thomson

FINAL REPORT: The objective for this project was to erect and operate a fibreglass greenhouse at Narrabri. The continued expansion of the three cotton breeding programmes and genetics research have placed increasing demands on existing glasshouse space which is now operating at capacity. With projected expansion and the likelihood of handling tissue-cultured material, additional space is required. Without such facilities research in the above-mentioned areas will be severely restricted.

Earthworks and site preparation, floor slab and footings, and construction of shed were completed during 1986/87. The balance of the work was completed in 1987/88 and the Greenhouse is in operation.
