COTTON RESEARCH COUNCIL

PROJECT CODE: CS49L

PROJECT TITLE: Modification of climatic data recording equipment for an Australian Cotton Cultivar Trial site.

STAFF INVOLVED: Mr PE Reid

FINAL REPORT

The objective of this project was to modify the weather station at our Breeza Australian Cotton Cultivar site to enable the use of the telephone system and the SIRATAC computer to collect the data.

The weather station at Breeza was modified, enabling the use of the telephone system and the SIRATAC VAX computer to collect data automatically on a daily basis. The data collected is analysed in conjunction with our cultivar trial results.
